

## Local Area Personal Income, 1969–96

*By Wallace K. Bailey*

**T**HIS ARTICLE presents new estimates of personal income and per capita personal income for local areas for 1996 and revised estimates for 1994-95, and it describes the basis for the revisions to the estimates for 1969-95 and the source data used to prepare the estimates for 1996. (See the box "Definitions of Local Areas.") The article also discusses the revisions to the estimates for selected metropolitan areas for 1995 and presents the metropolitan areas with the fastest and slowest growth of personal income in 1996 and the metropolitan areas with the highest and lowest per capita personal income in 1996.

The estimates of personal income for local areas for 1969–95 have been revised to incorporate the results from the revision to the annual estimates of State personal income that was released in September 1997 (see the box “**Data Availability**”).<sup>1</sup> The revised estimates of per capita

personal income for local areas for 1990–95 also reflect the revised estimates of county population released by the Bureau of the Census in March 1998.

### *Source data used*

This section identifies the principal source data used to revise the estimates for 1993-95 and to prepare the estimates for 1996.

*Revised estimates for 1993-95.*—The estimates of wage and salary disbursements and of other labor income now reflect the incorporation of revised source data, and the estimates of nonfarm proprietors' income, of dividends, interest, and rent, and of the adjustment for residence, which is an estimate of the net inflow of the earnings of inter-area commuters, now reflect the incorporation of source data that are more current than the source data used previously.<sup>2</sup>

The 1993-95 estimates of wage and salary disbursements and of other labor income were revised to incorporate revised tabulations of wages and salaries paid by employers—based on reporting under the State unemployment insurance system—provided by the Bureau of Labor Statistics (BLS).

The 1994-95 estimates of nonfarm proprietors' income were revised to incorporate data by county from the 1994 Federal income tax returns of sole proprietors and partnerships.

The 1995 estimates of dividends, interest, and rent and of the residence adjustment were revised to incorporate Internal Revenue Service tabulations of individual income tax return data for 1995.

*New estimates for 1996.*—The estimates of personal income for 1996 are based on the most

<sup>1</sup> For the New England region, OMB's preferred definitions of the metropolitan areas are in terms of cities and towns, but the available data for cities and towns are not sufficient to prepare estimates of personal income.

The list of the metropolitan areas and their constituent counties and county equivalents is available on BEA's Web site at <<http://www.bea.doc.gov>> and from the National Technical Information Service, Document Sales, 5205 Port Royal Road, Springfield, VA 22161 (703-487-4650) (Accession No. PB96-180575).

2. For a description of the economic areas and the methodology used to define them, see "Redefinition of the BEA Economic Areas," SURVEY 75 (February 1995): 75-81. This article and a list of the economic areas and their constituent counties and county equivalents are available on BEA's Web site.

income combined the usual annual State revision with the completion of the comprehensive State revision, including the incorporation of the results from the completion of the comprehensive revision of the national income and product accounts (NIPA's) released in April 1997 and from the annual revision of the NIPA's released in July 1997. See "Completion of the Comprehensive Revision of the National Income and Product Accounts, 1929-96," SURVEY 77 (May 1997): 6-9; and "Annual Revision of the National Income and Product Accounts," SURVEY 78 (August 1997): 6-10.

<sup>2</sup> See "Comprehensive Revision of Local Area Personal Income," Survey 77 (August 1997): 6-35.

current county source data that can be obtained.<sup>3</sup> The 1996 estimates of most of wage and

3. A detailed description of the methodology is available on BEA's Web site at <<http://www.bea.doc.gov>>, on the CD-ROM "Regional Economic Information System, 1969-96," and in a packet of free information (see the box "Data Availability"). The methodology on the CD-ROM is an updated version of the methodology presented on the Web site and in U.S. Department of Commerce, Bureau of Economic Analysis, *Local Area Personal Income, 1969-92* (Washington, DC: U.S. Government Printing Office, September, 1994).

salary disbursements are based on BLS tabulations of employers' 1996 payrolls. The estimates of other labor income and of personal contributions for social insurance are based mainly on the estimates of wages and salaries.

For farm proprietors' income, the estimates of government payments for all States and of gross receipts for most of the major farm States

## Acknowledgments

The revised estimates of local area personal income were prepared by the Regional Economic Measurement Division under the direction of Robert L. Brown, Chief. Hugh W. Knox, Associate Director for Regional Economics, provided general guidance.

Estimates of nonfarm wages and salaries and other labor income were prepared by the Regional Wage Branch under the supervision of Sharon C. Carnevale, Chief. Major responsibilities were assigned to Elizabeth P. Cologer, Lisa C. Ninomiya, Michael G. Pilot, John A. Rusinko, and James M. Scott. Contributing staff members were Ann E. Dunbar, Susan P. Den Herder, Lisa B. Emerson, John D. Laffman, Lela S. Lester, Russell C. Lusher, Richard A. Lutyk, Paul K. Medzerian, Mauricio Ortiz, Michael Phillips, Adrienne T. Pilot, William E. Reid, Jr., Victor A. Sahadachny, Elizabeth F. Stell, and Jaime Zenzano.

Estimates of farm wages and salaries and other labor income, proprietors' income, property income, transfer payments, personal contributions for social insurance, and the adjustment for residence were prepared by the Regional Income Branch. Major responsibilities were assigned to Charles A. Jolley and James M. Zavrel. Contributing staff members were Elaine M. Briccetti, Carrie L. Case, Daniel R. Corrin, Toan A. Ly, W. Tim McKeel, Jeffrey L. Newman, Suet M. Ng, James P. Stehle, Ellen M. Wright, and Marianne A. Ziver.

The public use tabulations and data files were assembled and the tables for this article were prepared by the Regional Economic Information System Branch. Major responsibilities were assigned to Kathy A. Albetski and Gary V. Kennedy. Contributing staff members were H Steven Dolan, Michael J. Paris, Albert Silverman, Nancy E. Smith, Callan S. Swenson, Monique B. Tyes, and Mary C. Williams.

## Data Availability

This article presents summary estimates of personal income and per capita personal income for 1994-96. Estimates in more detail for 1969-96 are available in other media.

The detailed estimates in one set of tables consist of personal income by type of payment, earnings by Standard Industrial Classification (SIC) two-digit industry, population, and per capita personal income for local areas for 1969-96. Supplemental tables present estimates of employment by SIC division, of transfer payments by program, and of the major categories of farm income and expenses.

In addition, one set of tables presents summary estimates of personal income, per capita personal income, and population, and another set presents summary estimates of wage and salary disbursements, wage and salary employment, and average wages per job. Both sets for all counties and metropolitan areas are available on BEA's web site at <<http://www.bea.doc.gov>>.

The entire set of estimates for all areas and for all years is available on the "Regional Economic Information System, 1969-96 CD-ROM"—product number RCN-0191, price \$35.00. This CD-ROM also contains the quarterly State estimates of personal income for 1969-97; the estimates of gross state product for 1977-94; the projections of personal income, earnings, and employment to 2045

for States, metropolitan areas, and BEA economic areas; the projections of gross state product to 2045; and an updated description of the sources and methods used to estimate local area personal income. The CD-ROM is designed for use with microcomputers equipped with the Windows 3.1 or Windows 95 operating systems, and it includes a program to help users select, display, print, and copy the tables.

To order the CD-ROM using Visa or MasterCard, contact the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666). To order by mail, send a check made payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230.

In addition, the following information is available free of charge: A sample packet of all tables, a description of the sources and methods used to prepare the local area estimates, and a list of the members of the BEA User Group—State agencies and universities from which the State and local area estimates can be obtained.

For more information about these products or to request the free information, call BEA's Regional Economic Information System at 202-606-5360, fax 202-606-5322, or E-mail [reis.remd@bea.doc.gov](mailto:reis.remd@bea.doc.gov).

are based on 1996 data from the Department of Agriculture and from State agricultural statistical agencies. The estimates of most of the production expenses are based on data from the 1992 Census of Agriculture.

For transfer payments, the estimates of social security benefits are based on 1996 data from the Social Security Administration, and the estimates of veterans benefits, on 1996 data from the Department of Veterans Affairs. The estimates of unemployment compensation and of transfer payments under most of the major means-tested programs—including medicaid, family assistance, supplemental security income, and food stamps—for most States are based on 1996 data from the State government agencies that administer the programs.

The 1996 estimates of nonfarm proprietors' income, of dividends, interest, and rent, and of the residence adjustment are based mainly on extrapolations of the data that were used to prepare the 1995 estimates.

#### ***Revisions to the 1995 estimates for metropolitan areas***

The effect of the revisions on the 1995 estimates of personal income for most metropolitan areas was small. Only three areas had upward revisions

of more than 3.0 percent, and only three areas had downward revisions of more than 2.0 percent (table A).

Together, the 10 areas with the largest upward revisions and the 10 areas with the largest downward revisions accounted for only 3.9 percent of the Nation's personal income in 1995. Only three of these areas are large—that is, their personal income is greater than \$50 billion; the other 17 areas together account for only 1.3 percent of the national total of personal income.

The upward revisions are generally larger than the downward revisions, mainly because of the 0.7-percent upward revision to the national estimate of personal income. The upward revision was more than accounted for by the upward revision to dividends, interest, and rent that reflected substantial upward revisions to personal dividend income and to the rental income of persons.<sup>4</sup> The revisions to the national estimates of the other

4. The upward revision to personal dividend income, which was revised as part of the annual revision of the NIPAs, primarily reflects the incorporation of newly available source data for dividends paid by regulated investment companies that are also known as mutual funds.

The upward revision to the rental income of persons reflects upward revisions from the incorporation of data from the biennial American Housing Survey and from regular annual sources as part of the annual revision of the NIPAs; these revisions more than offset a downward revision that reflects the revisions to the estimates of fixed reproducible tangible wealth released in April 1997 as part of the completion of the comprehensive revision of the NIPAs.

1. The revision to personal income as a percent of the previously published estimate.

2. This column shows the measures—the components of personal income and the adjustment for residence—that had revisions that substantially contributed to the revisions to personal income. The amount of revision for each measure is shown as a percentage of the previously published estimate of personal income for the area.

3. For San Jose, a substantial downward revision to other labor income partly offset the upward revisions to the other measures.

4. For Vineland-Millville-Bridgeton, a substantial upward revision to dividends, interest, and rent

partly offset the downward revision to the other measures.

W&S Wage and salary disbursements

OLI Other labor income

NFPI Nonfarm proprietors' income

DIR Dividends, interest, and rent

TP Transfer payments

AFR Adjustment for residence

components of personal income were relatively small and largely offsetting.

For all of the metropolitan areas with the large upward percentage revisions to 1995 personal income, the incorporation of the national revision to dividends, interest, and rent contributed substantially to the revisions. For most of the metropolitan areas with either large upward or large downward revisions, the incorporation of newly available county source data for 1995 for dividends, interest, and rent and for nonfarm proprietors' income contributed substantially to the revisions. The incorporation of newly available source data for 1995 into the adjustment for residence was the predominant factor in the large revisions to personal income for four areas and contributed substantially to the revisions for two areas.

### **Fastest and slowest growing metropolitan areas**

Eight of the ten metropolitan areas with the fastest growth in personal income from 1995 to 1996 were in the Southeast, Southwest, and Far

### **Alternative Measures of Household Income**

Three of the most widely used measures of household income are BEA's measure of personal income, the Census Bureau's measure of money income, and the Internal Revenue Service's measure of adjusted gross income of individuals.<sup>1</sup>

Personal income, in general, is a more comprehensive measure. For both the national and regional measures of household income, personal income is defined as the sum of wage and salary disbursements, other labor income, proprietors' income with inventory and capital consumption adjustments, rental income of persons, and transfer payments to persons, less personal contributions for social insurance. These measures include incomes of individuals, nonprofit institutions that primarily serve individuals, private noninsured welfare funds, and private trust funds. Proprietors' income is treated in its entirety as received by individuals. Life insurance carriers and noninsured pension plans are not counted as persons, but their income (and saving) is credited to persons.

The national measure of personal income differs slightly from the State and local area measure. The national measure includes, but the State and local area measure excludes, the labor earnings of U.S. residents who are temporarily working and living abroad (mainly Federal Government employees).

Money income consists of income in cash and its equivalents that is received by individuals, and it excludes employer contributions to private health and pension funds, lump-sum payments except those received as part of earnings, certain in-kind transfer payments—such

as medicaid, medicare, and food stamps—and imputed income.<sup>2</sup> Money income includes, but personal income excludes, personal contributions for social insurance, income from private pensions and annuities, and income from interpersonal transfers, such as child support.

Adjusted gross income consists of the taxable income of individuals who filed a Federal income tax return. It includes, but personal income excludes, personal contributions for social insurance, gains and losses on the sale of assets, and income from private pensions and annuities. Adjusted gross income excludes, but personal income includes, the income of the recipients of taxable incomes who, legally or illegally, did not file an individual tax return.

In addition, the presentation of personal income differs from that of money income. Personal income at the national, State, and local area levels is presented annually on a per capita (or simple average per person) basis. Money income at the national and State levels is presented annually both on a per capita basis and on a median (or middle of the income per household) basis.<sup>3</sup> Personal income is not adjusted for inflation, whereas the estimates of money income are adjusted to remove inflation, using the consumer price index.<sup>4</sup>

2. For a description of the imputations included in personal income, see *State Personal Income, 1929–93*, page M–48. On the Internet, go to <<http://www.bea.doc.gov>>, to "Information on BEA Methodology," to "Regional," and then to "State Personal Income, 1929–93."

3. For local areas, the most recent estimates of money income on a per capita basis are those for 1989 and on a median household basis are those for 1993.

4. At the national level, BEA also presents real per capita disposable personal income. (Disposable personal income equals personal income less personal tax and nontax payments; real disposable personal income equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.) For the sources of the prices used for this deflator, see "A Guide to the NIPA's," SURVEY 78 (March 1998): 62–64.

1. For additional information, see the Census Bureau's annual publication *Money Income in the United States*; the Internal Revenue Service's annual publication *Statistics of Income—Individual Income Tax Returns*; and Thae S. Park, "Comparison of BEA Estimates of Personal Income and IRS Estimates of Adjusted Gross Income: New Estimates for 1995 and Revised Estimates for 1947–94," SURVEY 77 (November 1997): 12–19.

West regions (**table B**). Three of the areas were in Florida, and two were in California.

In all of the fast-growing areas except Austin-San Marcos, TX, the average annual rates of growth in personal income in 1996 were above the average annual rates of growth from 1990 to 1995; in all of the areas except Merced, CA, the average annual rates of growth from 1990 to 1995 were well above the national growth rate for that period. In four areas, the rapid growth in 1996 reflected special factors. In Merced and Fargo-Moorhead, ND-MN, the rapid growth reflected sharp increases in farm income from low levels in 1995; Merced was the only metropolitan area with a decline in personal income in 1995. In Panama City, FL, and Fort Walton Beach, FL, the rapid growth reflected the return of rental income of persons to normal levels after declines in 1995 that reflected the damage to structures caused by Hurricane Opal.

The 10 metropolitan areas with the slowest growth or with a decrease in personal income in 1996 were dispersed throughout the Nation.

In all 10 of the slow-growing areas, the growth rates in personal income in 1996 were well below those from 1990 to 1995. In the Yuma, AZ, and Flint, MI, areas, the growth rates of personal income from 1990 to 1995 were much greater than the national growth rate. In Yuma, personal income declined in 1996; the decline reflected a sharp drop in farm income from an extraordinarily high level in 1995, when Yuma had the fastest growth in personal income of all the Nation's metropolitan areas. In most of the areas, earnings in locally important industries either slowed or declined: In Flint, MI, Gadsden, AL, Terre Haute, IN, and Utica-Rome, NY, manufacturing declined; in Alexandria, LA, Cheyenne, WY, Honolulu, HI, and Utica-Rome, State government declined.

#### **Highest and lowest per capita personal income metropolitan areas**

The 10 metropolitan areas with the highest per capita personal income in 1996 were generally large in terms of personal income and population; together, they accounted for 7.4 percent of the nation's personal income and 5.0 percent of the population (**table C**). Eight of the areas are

on the east coast, and two are on the west coast. Six of the areas are primary metropolitan statistical areas (PMSA's) that are part of the New York-Northern New Jersey-Long Island, NY-NJ-CT-PA, consolidated metropolitan statistical area (CMSA), and two are PMSA's in the San Francisco-Oakland-San Jose, CA, CMSA. These 10 areas were also the 10 highest in per capita personal income in 1995; nine of them ranked in the top 10 in 1990, and San Jose, CA, ranked 11th.

Generally, the 10 metropolitan areas with the lowest per capita personal income in 1996 were small in terms of personal income and population; together, they accounted for 0.6 percent of the Nation's personal income and 1.0 percent of the population. Seven of the ten areas are in the Southwest region, and the six lowest ranking areas are on the Mexican border. These 10 areas were also the 10 lowest in 1990.
